

Afik Aharon

Software Engineer · Backend & AI · Computer Science graduate

afik3248@gmail.com · 0556606990 · [LinkedIn](#) · [GitHub](#) · [Portfolio](#)

Backend developer and CS graduate with hands-on experience building production-grade systems, Generative AI pipelines, and full-stack applications. Proven ability to deliver in high-stakes enterprise environments, debug complex architectures, and learn new technologies rapidly. Eager to contribute to innovative teams and grow.

EDUCATION

B.Sc. Computer Science | [HIT - Holon Institute of Technology](#) | Jan 24 - Jul 26

- Coursework: Data Structures & Algorithms, Data Science, Cloud Infrastructure (AWS), Operating Systems. Developing expertise in scalable backend design and high-performance AI architectures.

WORK EXPERIENCE

System Consultant & Backend Developer | [Ness Technologies \(student position\)](#) | Nov 25 - Jul 26

- Backend development and system consulting for mission-critical, large-scale IDF Mainframe enterprise systems.
- Maintain and optimize high-scale architecture ensuring continuous production stability in secure environments.
- Investigate and resolve complex data-flow and architectural issues, requiring deep debugging across distributed systems.

Mainframe Backend Developer | [IDF - Shahar Tech Unit](#) | 2020 - 2023

- Developed and maintained critical backend systems on IBM Mainframe, translating complex business requirements into robust production code.
- Led end-to-end debugging of complex production failures, ensuring zero-downtime stability for core military systems.
- Mentored new developers on system architecture and collaborated cross-functionally on large-scale deliverables - demonstrating ownership and leadership early in career.

PROJECTS

Cost Manager Microservices API | [Node.js](#), [Express](#), [MongoDB](#), [Jest](#), [Postman](#) | Apr 26 - May 26 | [link](#)

- Architected and deployed a microservices-based RESTful API for personal cost management, structuring the system into four independent Node.js processes.
- Engineered scalable data models using MongoDB Atlas and Mongoose, implementing a Computed Design Pattern to cache monthly financial reports and significantly optimize database query performance.
- Established a robust testing and observability infrastructure by writing unit tests with Jest and Supertest, alongside a centralized logging system utilizing Pino to monitor cross-service traffic.

Generative AI for Architectural Change Detection | [Python](#), [PyTorch](#), [Hugging Face](#) | Oct 25 - Feb 26 | [link](#)

- Built an end-to-end AI pipeline to detect structural changes in architectural floor plans using DETR, SAM, and Stable Diffusion into a single synthetic data generation system
- Applied precision-recall optimization: identified a 0.30 decision threshold that boosted recall from ~50% to 96.2%, achieving F1 of 0.81.

TECHNICAL SKILLS

Languages	Python, SQL, JavaScript, Java.
Frontend	React.js, HTML/CSS.
Backend & Cloud	Node.js, AWS (pursuing certification), Linux, Git, CI/CD basics, REST APIs.
AI / ML	Generative AI pipelines, LLMs, Agentic workflows(learning), Prompt Engineering.
Languages	Hebrew (Native) · English (Professional)
